G42

Gulf

Website:	https://www.g42.ai
Description:	Abu Dhabi-based AI holding company building and deploying AI systems at national scale across the UAE and beyond. Operates across healthcare AI, cloud, defense, and enterprise transformation through subsidiaries including Core42.
Why target:	Deep-tech talent in LLM infrastructure, sovereign cloud, and enterprise AI. Abu Dhabi government-backed with Microsoft, Cerebras and OpenAI partnerships — engineers here are working on frontier AI deployment.

Core42

Gulf

Website:	https://www.core42.ai
Description:	UAE's national-scale sovereign cloud and generative AI enabler, formed from the merger of G42 Cloud, Inception, and Injazat. Provides AI-ready datacentre infrastructure and sovereign AI services to governments and regulated industries.
Why target:	Strong ML infrastructure, cloud engineering, and AI platform talent. Partners with UAE Central Bank and Mubadala — engineers with sovereign AI and regulated-sector experience.

TONOMUS

Gulf

Website:	https://tonomus.neom.com
Description:	NEOM's technology and digital subsidiary in Saudi Arabia, functioning as a cognitive technology conglomerate. Partners with Oracle, NVIDIA, and OneWeb to build AI-powered smart city infrastructure.
Why target:	\$1B+ annual AI investment, frontier engineering work on smart city AI, autonomous systems, and digital infrastructure. Attracts top global talent to Saudi Arabia.

Elm Company

Gulf

Website:	https://www.elm.sa
Description:	Saudi Arabia's leading digital government solutions company (PIF-owned, listed on Tadawul). Operates Absher, Muqem, and other national platforms processing hundreds of millions of transactions annually.
Why target:	Deep platform engineering talent with government-scale systems experience. Saudi nationals with rare sovereign digital infrastructure knowledge.

e& enterprise

Gulf

Website:	https://www.eandenterprise.com
Description:	The enterprise arm of e& (formerly Etisalat), UAE's largest telecom. Launched OneCloud (sovereign hyperscale cloud via Oracle Alloy) and UAE Sovereign AI Platform for national security applications.
Why target:	Cloud architects and AI platform engineers working at the intersection of telecom, sovereign cloud, and AI governance — rare combination.

Solutions by stc

Gulf

Website:	https://solutions.stc.com.sa
Description:	Technology solutions arm of Saudi Telecom Company (stc), providing digital transformation, cybersecurity, cloud, and IoT services. 79% owned by stc with deep ties to Saudi giga-projects.
Why target:	Strong systems integration and AI deployment talent serving Vision 2030 giga-projects. Engineers with rare cross-sector Saudi enterprise experience.

Palantir Technologies

US/Global

Website:	https://www.palantir.com
GitHub:	github.com/palantir
Description:	US-based enterprise AI platform company serving government and commercial clients. AIP (Artificial Intelligence Platform) enables ontology-driven AI agents for defense, intelligence, and industrial operations.
Why target:	Senior engineers working on production agentic AI systems at government scale. Palantir's AIP architecture overlaps heavily with AI governance and supply chain visibility.

C3.ai

US/Global

Website:	https://c3.ai
GitHub:	github.com/c3-e
Description:	Enterprise AI application platform providing industry-specific SaaS AI applications and the C3 Agentic AI Platform. Strong in defense, oil & gas, utilities, and supply chain. \$500M DoD contract in 2026.
Why target:	Platform engineers and ML engineers with deep enterprise AI and agentic workflow experience in regulated industries — directly relevant to supply chain AI.

o9 Solutions

US/India/Global

Website:	https://o9solutions.com
Description:	Dallas-based AI-powered Digital Brain platform for integrated enterprise planning. Uses Neuro-Symbolic AI for supply chain, demand, and financial planning. Reached \$150M ARR backed by Generation Investment and General Atlantic.
Why target:	Neuro-symbolic AI and supply chain planning engineers — rare combination of formal reasoning and operational AI at enterprise scale.

Kinaxis

US/Canada/Global

Website:	https://www.kinaxis.com
Description:	Canadian supply chain management platform (RapidResponse) for concurrent scenario planning, demand management, and supply orchestration. Used by major manufacturers globally.
Why target:	Strong supply chain algorithms and concurrent planning engineers. Canadian talent pool with deep operations research and ML skills.

Blue Yonder

US/Global

Website:	https://blueyonder.com
Description:	AI-driven supply chain platform for end-to-end planning, execution, and commerce. Acquired by Panasonic; covers demand forecasting, warehouse automation, and real-time disruption response.
Why target:	Supply chain AI and optimization talent with large-scale production deployment experience across retail, manufacturing, and logistics.

Altana AI

US/Global

Website:	https://altana.ai
Description:	AI-powered value chain visibility platform (Altana Atlas) for trade compliance, forced labor due diligence, procurement, carbon tracking, and supply chain security across multi-tier supplier networks.
Why target:	ML engineers working on graph AI for global trade networks — directly relevant to supply chain compliance and sovereignty concerns. AIAG-certified.

Resilinc

US/Global

Website:	https://www.resilinc.com
Description:	AI-powered supply chain risk and compliance platform with agentic AI at its core. Provides multi-tier supplier visibility and continuous risk monitoring across 150M+ sources in 150 countries.
Why target:	Agentic AI engineers in supply chain risk — monitoring news, satellite, and supplier signals at global scale with autonomous workflows.

project44

US/Global

Website:	https://www.project44.com
GitHub:	github.com/project44
Description:	Decision Intelligence Platform for supply chain with multi-agent AI orchestration. Connects 1.5B+ shipments annually for 1,000+ brands. Launched AI agent fleet in 2026 with 34% ARR growth.
Why target:	Strong AI agents and supply chain execution engineers. Rapidly scaling agentic platform — engineers building next-generation logistics intelligence.

Everstream Analytics

US/Global

Website:	https://www.everstream.ai
Description:	AI supply chain risk intelligence platform scanning weather, news, social signals, and satellite imagery to predict disruptions 48-72 hours ahead. Covers geopolitical, climate, and supplier risks.
Why target:	Data scientists and ML engineers working on multi-modal risk signal fusion — satellite imagery, NLP, and geospatial AI in supply chain context.

AspenTech

US/MENA/Global

Website:	https://www.aspentech.com
Description:	Industrial AI software for process optimization, asset performance management, and digital grid management. Deep presence in oil & gas, chemicals, and refining — sectors dominant in MENA. Active in Saudi and UAE refineries.
Why target:	Industrial ML and process optimization engineers with MENA client exposure — rare talent for bridging AI and heavy industry in the Gulf.

Honeywell

US/MENA/Global

Website:	https://www.honeywell.com/ae
GitHub:	github.com/honeywell
Description:	Industrial technology conglomerate with 60+ years in the Middle East. Provides process control, building automation, and industrial AI software. Active in UAE, Saudi Arabia, and Qatar across energy and manufacturing.
Why target:	Seasoned industrial software engineers with deep MENA market knowledge and long-tenured Gulf relationships — valuable for enterprise sales and deployment roles.

Holistic AI

Europe/Global

Website:	https://www.holisticai.com
GitHub:	github.com/holistic-ai
Description:	AI governance platform specializing in bias/fairness audits, AI risk management, and compliance frameworks (EU AI Act, NIST AI RMF). Differentiates on audit depth and runtime Guardian Agents.
Why target:	AI safety and governance researchers with formal methods and fairness expertise — directly relevant to responsible AI deployment in regulated Gulf sectors.

Credo AI

US/Global

Website:	https://www.credo.ai
Description:	Ranked #6 on Fast Company's World's Most Innovative Companies 2026 in Applied AI. Created the AI governance category with Agent Registry, multi-agent dependency mapping, shadow AI discovery, and pre-built policy packs (EU AI Act, ISO 42001, SOC 2).
Why target:	AI governance engineers and policy technologists at the cutting edge of agentic AI oversight — the exact intersection of AI and compliance that MENA regulators are increasingly demanding.

Arthur AI

US/Global

Website:	https://www.arthur.ai
GitHub:	github.com/arthur-ai
Description:	Industry's first Agent Discovery & Governance (ADG) platform combining automated agent discovery, native runtime guardrails, continuous evaluations, and end-to-end observability for enterprise AI agents.
Why target:	ML observability and AI safety engineers building runtime guardrails for agentic systems — highly relevant as Gulf enterprises deploy autonomous AI at scale.
